Abstract not available for NO783920

Abstract of corresponding document: **US4312087**

A fabric casing for elastic cores is provided, which cores have two opposite faces, such as cushions or pads, especially for stuffed furniture and the like. According to the invention the casing comprises two fabric pieces (2, 3) of different character with respect of for instance color and/or pattern, each of said pieces covering one of the core faces, said pieces being joined together all along the circumference of the core (1) in a plane (4) at half-way distance between the core faces, said pieces jointly projecting in said plane laterally outwardly a distance (f) exceeding said half-way distance to thus form a circumferential collar (5) whose peripheral edge (7) is reduced in length for instance by stitching or is resiliently reducible in length using, for example, an elastic ribbon to thus make said peripheral edge shorter than the core circumference in said plane (4), whereby the collar (5) can be pulled over variably onto one or the other of the core faces so as to cover core side surfaces between said faces, so that always the very same fabric is exposed to view on (i) said side surfaces and (ii) one of said faces.

**Fabric casing for elastic cores such as cushions and the like**

Claims of corresponding document: **US4312087**

What we claim is:

1. A fabric casing for elastic cores having two faces and a plurality of side surfaces, comprising: first and second different fabric pieces, each one of said pieces covering one of the faces of said core; said first and second different fabric pieces being joined together along the entire circumference of said core in a plane halfway distant between said core faces; said first and second pieces each overlapping the other a distance exceeding said halfway distance between said core faces to thus form a circumferential collar; and said circumferential collar having a peripheral edge shorter than the circumference of said core, whereby said collar can be pulled over said either one of said two core faces so as to cover said side surfaces between said faces such that the same one of said first and second different fabric pieces is exposed to view on one of said faces and said side surfaces of said core.

2. The fabric casing of claim 1, wherein said peripheral edge of said circumferential collar is shortened by means of stitches.
